## The application for the project for replacement of the old stoves in "Dolno Ezerovo" begins within days

Wednesday, 3 February 2021

Within days, the submission of documents for replacement of the old solid fuel stoves with new eco-appliances in the Dolno Ezerovo neighborhood will start. The initiative is implemented through a project of the Municipality of Burgas to reduce pollution with fine dust particles generated by domestic heating of wood and coal. The project envisages every household in the Burgas district to have the opportunity to apply for a free replacement of the old stove with a new heater. Over 2280 households can take advantage of this new opportunity.
