

Trash cans are being washed and disinfected in Burgas

Friday, 9 April 2021

Trash cans will be washed and disinfected using specialized equipment in Burgas. The treatment of the vessels has already started in complex "Meden rudnik" and will take place in several stages.

After collecting the garbage, the remaining adhesive materials are mechanically cleaned, and the dishes are washed internally and externally. The inner walls of the containers are then treated with a disinfectant.

According to the plan, such treatment will be done on all containers for household waste in Burgas, and 40 containers are being processed per day with specialized equipment.
