

## Burgas merges technology and education with new project - "First class start"

Monday, 15 April 2019

Posted by: Stefan Minchev

The project "First class start" is about to make its first steps into realisation. The aim of the project is to provide new, more modern classrooms for first graders, along with new antibacterial flooring, LED lighting, new lockers and new single desks with different ways of configuration, electronic textbooks and electronic school registers. All of that is planned to happen for all schools in the area and is also expected to be ready for use this fall.

To aid the teachers, an educational meeting this April has already been held this April aimed to help the teachers get to grips with the new system. A conference is planned on the 14th and 15th of June where the teachers can help each other in making sure that the system will work smoothly and that everybody is comfortable with it before the beginning of the new school year.

Burgas is the first city to organize electronic first grade admission, which should help parents and their children with admission in new schools.
