

40 young linden trees in the Sea Garden are being planted

Wednesday, 10 March 2021

In order for the people of Burgas not to wonder what are these holes in the Sea Garden, we announce that the formation of nests for planting 40 young trees there has begun. They will be linden. The new vegetation will be imported in the area between the Sea Casino and the paragliding site, as well as around the new fountain. There have always been linden trees on the main street and in the Sea Garden of Burgas. Now young fragrant trees of this species are being replanted, many times more than removed sick, dead, and dangerous ones.
