

The washing and disinfection of the garbage container in Burgas continues

Wednesday, 21 April 2021

In Burgas, the activity of complete washing and disinfection of garbage containers continues. The cleaning started from the Meden Rudnik complex, where all the vessels have already been treated. As of this week, the vessels in the Izgrev, Slaveykov, and Zornitsa complexes are also being processed. The complete cleaning of the containers is done with a specialized machine. After the mechanical removal of the adhered materials, they are washed internally and externally. They are then sprayed with a disinfectant solution, placed back on the sites, and washed externally with a water jet. According to the plan, such treatment will be done on all containers for household waste in Burgas, and 40 pieces are processed per day with the specialized equipment.
